

WHAT IS CLAIMED IS:

1. A robot cleaner comprising:
 - a body automatically traveling on a surface to be cleaned;
 - a driving unit for driving a plurality of wheels provided under the body;
 - 5 at least one obstacle detecting sensor positioned to a front of the body for detecting an obstacle located ahead of a traveling direction;
 - memory for storing position information of the obstacle detected by the obstacle-detecting sensor;
 - a dust vacuuming and collecting section installed to the body for vacuuming
 - 10 dust on a floor;
 - a disinfecting section installed under a bottom portion of the body for disinfecting the floor; and
 - a control section for controlling the driving unit to traverse the robot cleaner along a given traveling path and control the dust vacuuming and collecting section and
 - 15 the disinfecting section.
2. The robot cleaner as claimed in claim 1, wherein the disinfecting section operates simultaneously with or separately from the dust vacuuming and collecting section.
- 20 3. The robot cleaner as claimed in claim 1, wherein the disinfecting section includes
 - a disinfection lamp;
 - a receptacle chamber formed on a bottom of the body for accommodating the
 - 25 disinfection lamp; and
 - a transparent window detachably engaged to the receptacle chamber, through which the disinfection lamp irradiates a light on the floor.
4. The robot cleaner as claimed in claim 1, wherein the disinfecting section is
- 30 installed to one front portion of the bottom of the body.
5. The robot cleaner as claimed in claim 1, wherein the disinfecting section is

installed between the driving unit and the dust vacuuming and collecting section under the bottom of the body.

6. The robot cleaner as claimed in claim 1, wherein the disinfecting section is
5 installed to one rear portion of the bottom of the body.

7. The robot cleaner as claimed in claim 1, wherein the disinfecting section is installed to left and right sides of the bottom of the body.

10 8. The robot cleaner as claimed in claim 1, wherein the driving unit includes
a pair of motors installed in the body and driven by supplied power;
a pair of driving wheels rotated by the pair of driving motors;
a pair of driven wheels followed by the pair of driving wheels; and
transmission means for driving the driving wheels and the driven wheels.

15

9. The robot cleaner as claimed in claim 8, wherein the transmission means is a timing belt.
